Projects

Sales Performance Dashboard: —

Tools Used: Tableau, Python

Description: Developed a sales performance dashboard for a retail company. Used Python to clean and per-process sales data, then created interactive visualizations in Tableau. The dashboard included key metrics like total sales, sales growth, top-performing products, and sales by region. This project enabled stakeholders to track and analyze sales performance, leading to improved sales strategies.

Customer Segmentation Analysis: —

Tools Used: Excel, Tableau

Description: Established a customer segmentation project for an e-commerce platform using Python for data analysis and machine learning. Applied clustering algorithms to segment customers based on purchasing behavior and demographic data. Visualized the segments in Tableau, Highlighting key characteristics of each segment. The project provided insights into customer groups, allowing for targeted marketing strategies and personalized customer experiences.
